Responsive Web Design ScoreCard

Answer the following questions to determine the current mobile responsiveness of your website.
Tally the total score of the dots you filled in the end.

	Poorly	Decently	Thoroughly
Our website uses fluid grids Percentage based fluid grids allows your website to flex and adapt to any screen size.	1	2	3
Our images are flexible Images that are sized in relative units prevents them from displaying outside their containers.	1	2	3
Our website has multiple size layouts No design is universal. Great responsive websites have multiple layouts for each page to ensure the website looks its best on every browser.	1	2	3
Our web elements are scaled up for mobile Simply having things scale down based on the browser isn't good responsive web design. Making sure that your type and images are appropriately sized for the small screen is important.	1	2	3
Our navigation toggles for mobile Large navigation bars often cannot fit inside the small mobile browser space. Having a toggle menu for your navigation ensures your user can easily access your entire website.	1	2	3
